STUDY NOTES

Demography

DEMOGRAPHY

Introduction to Demography

Demography is the scientific study of populations, focusing on their **size**, **structure**, and **distribution**. It examines population-related processes such as **birth and death rates**, **migration**, and **population composition** (e.g., age, gender, marital status). Demography is divided into two main areas:

- **Formal Demography:** Deals with the **quantitative analysis** of population data, such as statistical patterns of births, deaths, and migration.
- **Social Demography:** Focuses on the **social, economic, and political** factors influencing population changes.

Historical Background

- **Origins of Census:**
 - The first modern census was conducted in the **United States in 1790**.
 - In **India**, the census began between **1867–72** and has been conducted regularly every decade since **1881**.
- **India's Census:**
 - The **largest census exercise globally**, it covers every aspect of the population, including housing, education, employment, and health.
 - It is a crucial tool for **economic planning** and monitoring **public welfare programs**.
- **Evolution Over Time:**
 - Early demographic studies focused primarily on **population size** and **growth rates**.
 - Modern demography incorporates aspects like **gender studies**, **urbanisation**, **migration**, and **fertility patterns**.

Relevance in Contemporary Society

- **Policy Formulation:**
 - Governments rely on demographic data to **forecast population trends**, allocate resources, and address pressing societal challenges like **ageing populations** or **youth unemployment**.
- **Global Comparisons:**
 - Demographic studies allow nations to **benchmark their progress** in areas like health, education, and social equity.
- **Technological Advancements:**
 - With advancements in **data analytics** and **AI**, demography is becoming even more relevant for **real-time decision-making**.

Key Theories in Demography

Malthusian Theory of Population Growth:

- Proposed by Thomas Malthus (1798).

- **Key Idea:** Population grows geometrically, while food production grows arithmetically, leading to inevitable poverty unless population growth is controlled.
- Criticism:
 - Historical experiences (e.g., in Europe) disproved it.
 - Poverty is linked more to unequal resource distribution than population growth.

Theory of Demographic Transition:

- Links population growth to economic development in three stages:
 - Stage 1: High birth and death rates, low growth.
 - Stage 2: Declining death rates, high growth (population explosion).
 - Stage 3: Low birth and death rates, stabilised population.

Demographic Dividend refers to the **economic growth potential** that arises from changes in a country's age structure. It occurs when the **working-age population (15–64 years)** grows larger than the non-working-age groups (children and elderly), creating opportunities for economic advancement.

Demographic Indicators

Indicator	Definition	Significance	Current Trends in India
Birth Rate	Number of live births per 1,000 people annually .	Reflects population growth potential and reproductive behaviour.	India's birth rate has declined due to awareness and family planning but remains higher than global averages.
Death Rate	Number of deaths per 1,000 people annually .	Indicates health conditions, healthcare access, and mortality rates.	Declining steadily due to improved healthcare, nutrition, and sanitation.
Natural Increase	Difference between birth and death rates.	Measures population growth without considering migration.	India's natural increase has slowed but continues to contribute to population growth.

Fertility Rate	Number of live births per 1,000 women aged 15–49 years.	Determines generational replacement and family size trends.	India's fertility rate has dropped to below 2.1 in several states, approaching replacement level.
Infant Mortality Rate	Number of deaths of children below 1 year per 1,000 live births.	Indicator of public health, sanitation, and maternal care quality.	India's rate has declined significantly but remains a concern in rural and underserved areas.
Maternal Mortality Rate	Number of women dying in childbirth per 100,000 live births.	Reflects healthcare quality, particularly maternal and obstetric care.	Maternal deaths have decreased due to better healthcare facilities and government schemes like Janani Suraksha Yojana.
Life Expectancy	The average number of years a person is expected to live.	Indicates overall living standards, healthcare, and economic conditions.	India's life expectancy has improved, with urban areas often outpacing rural areas.
Sex Ratio	Number of females per 1,000 males.	A critical indicator of gender equity and social practices.	India's sex ratio has improved slightly in recent years but still shows imbalance due to son preference and sex-selective practices.
Age Structure	Proportions of the population in different age groups.	Affects workforce availability, dependency ratios, and economic growth.	India's predominantly young population offers a demographic dividend , with a growing working-age population.

DID YOU KNOW?

India has officially surpassed China to become the **world's most populous country** in 2023, according to the **United Nations Population Division**. The estimated population of India stands at **1.428 billion**, slightly ahead of China's **1.426 billion**.

India's Population Trends

Population Size and Growth

- **India's Population:** Second most populous country after China with **121 crore (1.21 billion)** as per Census 2011.
- **Historical Growth:**
 - **1901–1951:** Annual growth rate did not exceed **1.33%**.
 - **1911–1921:** Negative growth rate of **-0.03%** due to the **1918–19 influenza epidemic** which killed **12.5 million people (5% of the population)**.
 - **Post-Independence:** Growth increased to **2.2% during 1961–1981** but has declined since.

Population Trends and Factors

- **Birth Rate vs. Death Rate:**
 - High **birth and death rates** before 1931.
 - Post-1921: Sharp decline in **death rates** due to improvements in healthcare, vaccinations, and sanitation. Birth rates declined more slowly.
- **Regional Variations:**
 - States like Andhra Pradesh, Tamil Nadu, and Kerala have **below replacement-level fertility rates**.
 - States like Bihar and Uttar Pradesh have **high fertility rates** contributing significantly to future population growth.

Population Growth of India in the 20th Century

Year	Total Population (Millions)	Average Annual Growth Rate (%)	Decadal Growth Rate (%)
------	-----------------------------	--------------------------------	-------------------------

1901	238	-	-
1911	252	0.56	5.8
1921	251	-0.03	-0.3
1931	279	1.04	11.0
1941	319	1.33	14.2
1951	361	1.25	13.3
1961	439	1.96	21.6
1971	548	2.22	24.8
1981	683	2.20	24.7
1991	846	2.14	23.9
2001	1,028	1.95	21.5
2011	1,210	1.63	17.7

Fertility and Birth Rates

- **Current Fertility Trends:**
 - States like **Kerala, Tamil Nadu, and Andhra Pradesh** a total Fertility Rate (TFR) of **1.7**, below replacement level.
 - States like **Bihar and Uttar Pradesh**: TFRs of **3.3** and **3.1**, respectively.
- **Sample Registration System (2020):**
 - **Crude Birth Rate: 19.5 per 1,000 population.**
 - **Rural: 21.1 per 1,000; Urban: 16.1 per 1,000.**
 - Bihar (**25.5**) and Uttar Pradesh (**25.1**) have the highest birth rates.

CHART 1: BIRTH AND DEATH RATE IN INDIA 1901-2017

Regional Contribution to Projected Population Growth (2041)

Region/States	Contribution (%)
Uttar Pradesh and Bihar	28%
Madhya Pradesh, Rajasthan, and Chhattisgarh	15%
Andhra Pradesh, Telangana, Tamil Nadu, Kerala, Karnataka	16%
Maharashtra and Gujarat	13%
West Bengal, Odisha, and Jharkhand	13%
Punjab, Haryana, and Delhi	5%
Remaining States	10%

Age Structure of the Indian Population

- **Young Population:** India has a predominantly young population with an average age lower than most other countries.
- **Age Composition:**
 - **Under 15 years:** Declined from **42% in 1971** to **29% in 2011** and projected to further decrease to **23% by 2026**.
 - **Working-age group (15–59 years):** Increased from **53% in 1961** to **63% in 2011** and is projected to rise slightly to **64% by 2026**.
 - **Elderly (60+ years):** Increased from **6% in 1961** to **8% in 2011**, expected to rise to **12% by 2026**.

Age Composition of Indian Population (1961–2026)

Year	0–14 Years (%)	15–59 Years (%)	60+ Years (%)	Total (%)
1961	41	53	6	100
1971	42	53	5	100
1981	40	54	6	100
1991	38	56	7	100
2001	34	59	7	100
2011	29	63	8	100
2026	23	64	12	100

- Data Source: Technical Group on Population Projections, National Commission on Population.

Key Trends

- **Declining Youth Proportion:**
 - The share of the **0–14 age group** is expected to decrease by **11%** from 34% in 2001 to 23% in 2026.

- **Rising Elderly Proportion:**
 - Share of the **60+ age group** to increase by **5%** from 7% in 2001 to 12% in 2026.
- **Bulge in Working-age Population:**
 - The largest share lies in the **15–59 years age group**, offering potential for economic growth through a **demographic dividend**.

Regional Variations

- **Kerala:**
 - Acquiring an age structure similar to developed countries.
 - Higher elderly population with reduced youth proportions.
- **Uttar Pradesh:**
 - A high proportion of younger age groups.
 - Low proportions among the aged.

Population Pyramids

- **Population Pyramid (1961–2026):**
 - **1961–1981:** Wide base indicating high birth rates with a slow decline.
 - **2001–2026:** Narrowing base due to declining birth rates; widening middle reflects working-age population growth.
 - **2026:** Significant increase in elderly population as life expectancy improves.
- **Regional Pyramids for 2026:**
 - **Kerala:** Narrow base and wider upper segments, resembling a developed country's age structure.
 - **Uttar Pradesh:** Broad base, indicating high fertility rates and a younger population.

Implications of Age Structure

- **Demographic Dividend:**
 - India's large working-age population presents an economic opportunity.
 - A smaller elderly population reduces dependency, creating potential for savings and investments.
- **Challenges:**
 - Regional disparities require targeted policy measures.

- Managing an increasing elderly population demands improved healthcare and social security.

Declining Sex Ratio in India

Globally, sex ratios are slightly in favour of females due to biological advantages. **India's Trend:** Declining sex ratio for over a century, highlighting gender imbalances in society.

Key Trends in Sex Ratios (1901–2011)

Year	Sex Ratio (All Age Groups)	Variation Over Decade	Child Sex Ratio (0–6 Years)	Variation Over Decade
1901	972	–	–	–

1951	946	+1	-	-
1961	941	-5	976	-
1991	927	-7	945	-17
2001	933	+6	927	-18
2011	943	+10	919	-8

Alarming Decline in Child Sex Ratio

- **Sharp Decline:** From **976 in 1961** to **919 in 2011**, indicating severe gender imbalance among children.
- **Notable Decadal Trends:**
 - **1991–2001:** The child sex ratio fell below the overall sex ratio for the first time.
 - **2011 Census:** A further drop of **13 points** in the child sex ratio, reaching **919 females per 1000 males**.

State-Wise Child Sex Ratios (2011)

Category	States/UTs	Examples
Below 900	Haryana (793), Punjab, Delhi, Chandigarh	Haryana is the worst at 793 .
900–925	Uttar Pradesh, Madhya Pradesh, Himachal Pradesh	Significant concern.
926–970	West Bengal, Assam, Tamil Nadu, Karnataka	The national average of 919 lies here.
Above 970	Arunachal Pradesh (972), Kerala	Arunachal Pradesh leads at 972 .

Population Policy in India

- **Definition:** Population policy addresses population growth, health, and socio-economic challenges.

- **Importance:** Vital for development and public health, particularly in developing nations like India.
- **First Policy:** India was the **first country** to officially announce a population policy in **1952**.

Historical Development

- **1952:**
 - Launch of the **National Family Planning Programme**.
 - Objectives:
 - Control **population growth**.
 - Improve **public health standards**.
 - Increase public awareness about **population and health issues**.
- **National Emergency (1975–76):**
 - Coercive measures like **mass sterilization** (vasectomy for men, tubectomy for women) were introduced.

- Mostly targeted the **poor** and **powerless**.
- This resulted in widespread opposition and abandonment after the Emergency.
- **Post-Emergency Era:**
 - Renamed as the **National Family Welfare Programme**.
 - Shift from coercion to a **broad-based socio-demographic approach**.
- **National Population Policy (2000):**
 - Focused on socio-demographic goals.
 - Aimed to address **fertility rates, maternal and child health, and population stabilization**.

Key Goals of National Health Policy 2017

Recent Policies in Population Control and Health

Policy/Step	Year	Key Features	Impact/Goal
National Population Policy (NPP)	2000	Stabilize the population, reduce fertility rates, and improve maternal and child health.	Achieve replacement-level fertility (TFR of 2.1).

National Health Policy (NHP)	2017	Increase health expenditure to 2.5% of GDP, reduce MMR to 100 by 2020, and reduce TFR to 2.1 by 2025.	Strengthen health services and address population-related challenges.
Mission Parivar Vikas	2016	Targeted intervention in high fertility districts (Total Fertility Rate >3).	Focus on family planning services, contraceptive availability, and behavioural changes.
Beti Bachao, Beti Padhao	2015	Prevent gender-biased sex-selective practices, improve girl child education and survival.	Increase child sex ratio and empower women.
Ayushman Bharat (PMJAY)	2018	Provide health coverage up to ₹5 lakh per family annually for secondary and tertiary care hospitalization.	Reduce financial burden on families, improve healthcare access.
Pradhan Mantri Matru Vandana Yojana	2017	Provide financial assistance to pregnant and lactating mothers for their first child.	Promote maternal health and reduce infant mortality.
Janani Suraksha Yojana (JSY)	2005	Encourage institutional deliveries among poor pregnant women through financial incentives.	Reduce maternal mortality rate (MMR) and improve newborn survival.
Universal Immunization Program	Ongoing (Updated 2014)	Expand immunization coverage for diseases like measles, rubella, polio, and pneumonia.	Improve child survival and reduce infant mortality.

Enhanced Access to Family Planning	2019	Introduced new contraceptives like Antara (injectable) and Chhaya (pills) under Mission Parivar Vikas.	Improve access to modern contraceptive methods.
Suman Scheme (Safe Motherhood Assurance)	2019	Ensure quality healthcare during pregnancy and childbirth without financial burden.	Improve maternal and neonatal survival .
Rashtriya Kishor Swasthya Karyakram	2014	Focus on adolescent health, including nutrition, sexual health, and mental well-being.	Target adolescents for long-term demographic benefits.
Prenatal Diagnostic Techniques Act (PCPNDT)	1996 (Amended 2003)	Ban sex-selective abortions and regulate prenatal diagnostic technology.	Address the declining child sex ratio .
National Rural Health Mission (NRHM)	2005	Strengthen rural health systems and address maternal and child health.	Reduce MMR, IMR, and TFR in rural areas.

Demographic Challenges in the 21st Century

- **Economic Inequality:** Uneven access to resources exacerbates poverty and poor living conditions.
- **Employment:** Job creation has not kept pace with the growing labour force.
- **Urban Infrastructure:** Rapid urbanization strains housing, sanitation, and public services.
- **Education and Health:** Investments in education and health are critical for sustainable development and leveraging the demographic dividend.

Census Overview

Category	Details
Census Year	2011
Motto	"Our Census, Our Future"
Phases	1. House Listing (April-Sept 2010) 2. Population Enumeration (Feb 9-28, 2011)
Commissioner	Mr. C. Chandramouli
Conducted by	Registrar General & Census Commissioner of India under MHA

States/UTs Covered	28 States, 7 UTs
Administrative Units	Districts: 640 Sub-districts: 5,924 Towns: 7,936 Villages: 6.41 Lakh

Population Statistics

Parameter	Details
Total Population	1,210,569,573 (121 crore)
Male Population	623,121,843 (62.3 crore)
Female Population	587,447,730 (58.7 crore)
Urban Population	31.2% (approx. 37 crore)
Rural Population	68.8% (approx. 84 crore)
Sex Ratio (All Ages)	943 females per 1000 males
Child Sex Ratio (0-6 years)	919 females per 1000 males
Population Density	382 persons/sq km
Increase in Population (2001-2011)	181 million

Literacy Statistics

Parameter	Details
Total Literacy Rate	74.04%
Male Literacy Rate	82.14%
Female Literacy Rate	65.46%
Literacy Gap (Male-Female)	16.68%
Top Literacy State	Kerala (94%)
Lowest Literacy State	Bihar (61.8%)
Highest Literate District	Serchhip (Mizoram)

Lowest Literate District	Alirajpur (Madhya Pradesh)
---------------------------------	----------------------------

Population Growth

Parameter	Details
Absolute Population Growth	18.19 crore (17.7%)
Urban Growth (Top States)	1. Maharashtra 2. Uttar Pradesh 3. Tamil Nadu
Rural Growth (Top States)	1. Uttar Pradesh 2. Bihar 3. West Bengal
**State with Highest Growth (by %) **	Meghalaya
State with Negative Growth	Nagaland

Special Categories

Parameter	Details
SC Population Percentage	16.6%
ST Population Percentage	8.6%
Highest Urban Population	Goa
Zero SC Population State	Nagaland
Highest Buddhist/Jain Population	Maharashtra

Religion-Wise Growth (2001-2011)

Religion	Growth Rate (%)
Hindu	16.76
Muslim	24.60
Christian	15.50
Sikh	8.40

Jain	5.40
------	------

Workforce Statistics

Parameter	Details
Male Workforce Participation	53.26%
Female Workforce Participation	25.51%
Workforce by Sector	Primary: 54.6% Secondary: 24.3%

Most Populous States

Rank	State	Population
1	Uttar Pradesh	~20 crore
2	Maharashtra	~11 crore
3	Bihar	~10 crore
4	West Bengal	~9.1 crore
5	Andhra Pradesh	~8.5 crore
6	Madhya Pradesh	~7.3 crore
7	Tamil Nadu	~7.2 crore
8	Rajasthan	~6.8 crore
9	Karnataka	~6.1 crore
10	Gujarat	~6 crore
